

Environmental, social and governance in emerging economies

UK, 14.09.2022

AUTHORS

Dr Ahmed Eltweri

Assistant professor in Accounting- Liverpool John Moores University

ABSTRACT

Environmental, social, and governance (ESG) issues are becoming increasingly important for emerging economies. ESG refers to the three central factors in measuring the sustainability and ethical impact of an investment in a company or business. Companies in emerging economies are investing more resources in ESG initiatives to ensure their operations are sustainable and in line with global standards. ESG is also becoming an important factor for investors as more investors are taking into account ESG factors when making their investment decisions. This is especially true for investors in emerging economies, as they are looking for investments that have a positive environmental and social impact while achieving a good return on investment. ESG initiatives can help companies in emerging economies reduce their environmental footprint, create more jobs, and improve their overall governance. This paper will discuss the importance of ESG in emerging economies, the challenges and opportunities, and the need for companies and investors to focus on ESG as an important factor for success.
